

terms of airborne infection control.

General Filter can cover any filtration need in the various hospital wards and operating rooms, in compliance with local and international regulations, offering cutting-edge solutions ranging from air-conditioning, filtration of operating theatres and laboratories, to the more specific needs of infectious wards, intensive care and CT departments.

Among our products, the unidirectional mixed flow ceiling diffusers: aimed at guaranteeing sterility on the operating table, they consist of a filtering section composed of LAM GEL laminar absolute filters with H14 efficiency according to the EN 1822 European standard. The GEL seal guarantees the absence of any bypass and makes them particularly easy to install on the structure.
